

GOT RABBITS?

REDUCE RABBIT POPULATIONS NOW WITH ONE-SHOT

The Midlands Biosecurity Group (MBG) is here to provide support to producers **THIS SUMMER** to drastically reduce rabbit populations.

The Calicivirus is impacting rabbit populations with reports of dead rabbits across our region. **HOWEVER**, best case scenario - it will only control up to 40% of your population!

FOLLOWING UP WITH TRADITIONAL CONTROL METHODS IS A CRUCIAL PART OF LONG TERM RABBIT MANAGEMENT AND CONTROL.

One-Shot' is the preferred product as it meets the pre-feeding requirement for effective control.

POISONING WITH ONE-SHOT

MOST EFFECTIVE IN LATE SUMMER OR EARLY AUTUMN'

The MBG can provide:

- 1080 "One-Shot"
- Support from LPMT to mix "One-Shot" with filler oats (provided by farmer)
- **Bait laying machines to trail out oats**

The MBG can also mix in bulk quantities, using a mixing trailer kindly loaned by the Central Wheatbelt Biosecurity Association (CWBA).

REGISTER YOUR INTEREST TO GET YOUR ONE-SHOT!
